1, applying a pressure to the heat radiator by at least one support pin so as to cause a stress in the lead frame as recited in independent claim 12 and applying a pressure to the semiconductor assembly with the support pin so as to cause a stress in the lead frame as in the invention of claim 15.

Instead, JP '282 discloses a substrate 2 that is sandwiched between pins 10 and 11. Thus, no stress is caused in the substrate 2.

In view of the foregoing, Applicant respectfully submits that this application is in condition for allowance. Favorable consideration and prompt allowance are earnestly solicited.

Should the Examiner believe that anything further would be desirable in order to place the application in even better condition for allowance, the Examiner is invited to contact Applicant's undersigned representative at the telephone number listed below.
